

Website Specifications

Objective: The website for Crossroads Car Wash and Valet aims to establish a professional online presence that converts visitors into paying customers as well as attract and create new customers, while also allowing for online services like car wash booking from the comfort of their homes and presentation of past work

Business Goals:

1. Attract new customers
2. Enable online booking
3. Display pricing and packages clearly on the website
4. Display quality of work
5. Build brand credibility

Target Audience

Target Audience — Car Owners in Botswana looking to get their cars washed

Secondary Audience — Fleet & Corporate Clients

Small businesses and companies that own fleets of vehicles (delivery vans, company cars) and require regular cleaning contracts. These clients are high-value and repeat customers.

DEMOGRAPHICS

Age : 18 and above (mainly because 18 is when people are legally allowed to drive)

Gender : Any Gender as long as they own a car

Location : Gaborone and near areas.

Income Level : Middle to upper income (personal or company cars)

Vehicle type: Sedans, SUVs, bakkies and company fleet vehicles

Technical Aptitude:

Most of the target audience accesses the internet primarily via smartphone. Botswana is turning into a digitalized country at a fast rate, with mobile data being the dominant mode of connectivity. Therefore, the website must be designed Mainly for mobile use. Users are generally used to social media platforms and basic online transactions but may not be used to complex web interfaces. This means the website must be simple, fast loading on mobile data connections, and require minimal steps to complete a booking.

Type of Website & Content

Website Type: Informational Business Website with Transactional Functionality

This will be a hybrid website combining two types:

1. Informational Website (primary layer) The core of the site presents the business who they are, what services they offer, where they are located, and why customers should choose them.

2. Transactional/Booking Website (functional layer) Layered on top of the informational content is a booking system that allows customers to select a service, choose a date and time, and confirm an appointment.

Content to be Designed:

Services and pricing

Online booking and operational days

Customer testimonies

Location of carwash

Technical Brief

Structure – HTML5

Styling – CSS

Interactivity – JavaScript

Code editor – VsCode
